| | The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply | | | | | |
| A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). | | | | | | |

DETAILED ACTION

Election/Restrictions

- 1. Applicant's election without traverse of Species C (Figs. 14-15) in the reply filed on June 23, 2005 is acknowledged.
- 2. Claims 6, 9-11, and 15 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made without traverse in the reply filed on June 23, 2005.

Information Disclosure Statement

3. The information disclosure statements filed 7/09/03, 12/08/03, 3/25/04, 3/03/05 are acknowledged. See enclosed IDS forms.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 1, 2, 5, 7, 8, 12, 18, and 19 are rejected under 35 U.S.C. 102(b) as being anticipated by DE 20115316 U1 (Note US Pub. No. US 2003/0052209 A1 is equivalent for English translation).

Art Unit: 3616

DE 20115316 discloses a webbing retractor for an belt comprising: a take-up shaft (10); a driven shaft (12); a prime mover (24); a rotating member (34); an urging member (36) for urging the rotating member in a direction of rotation of the prime mover rotating body (see Figure 3a); connecting members (26); a driving mechanism (46; see Figure 2); and a braking mechanism (38 & 42). As seen in Figure 1, the driven shaft is rotatably connected integrally with the take-up shaft. As seen in Figures 3a-3c, the connecting members 26 can approach and move away from the driven shaft. Regarding claim 18, braking member 42 applies a frictional force to the rotating member. A rotational transmitting mechanism (44) is provided between the output shaft and the prime mover rotating body.

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claims 16 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over DE 20115316 in view of Yanagi et al. (5,788,281).

DE 20115316 is discussed above but fails to show the control unit controlling the driving mechanism.

Yanagi et al. teaches a control unit (42) which controls operation of the driving mechanism (40) which includes a vehicle speed sensor (70) to detect the vehicle deceleration.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify DE 20115316 with the teachings of Yanagi et al. to provide a control unit to control the retractor based on the vehicle deceleration to better protect the occupant.

Additionally, it would have been obvious to one of ordinary skill in the art at the time the invention was made to control the driving mechanism based on sensed distance as is old and well known in the art.

· Allowable Subject Matter

8. Claims 3, 4, 13, and 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

- 9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hibata shows a retractor of interest. Gorman et al. shows a retractor of interest. Hamaue shows a retractor of interest.
- 10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to David Dunn whose telephone number is 571-272-6670. The examiner can normally be reached on Mon-Fri, 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paul Dickson can be reached on 571-272-6669. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
